

Sample QR Code

## QR Codes and how they work!

When a QR code is scanned with a smartphone camera or a QR code scanner, the unique pattern on the barcode translates into human-readable data, or links to a video, or website or even populates an email. This transaction happens in seconds.

QR codes have become a very valuable tool, on our safety websites we use them as links for reference guides via links to Crash Fire Rescue aircraft extraction videos, and also link to PDF version of how to extract people and how to secure aircraft.

Please scan any of our QR codes and watch an important information packed video, remember anyone can be a first responder, and the more people that are educated about aircraft safety the better. It will improve your chances of a better more educated rescue if you happen to get into trouble. These are for reference only.

Also please feel free to save our QR codes and create a word doc or PDF. Select the a/c that are at your Airshow or Event, or on your airfield and share with the local Crash Fire Rescue people and help them help you by being educated on those aircraft.
