

Extraction Info for Brad Wursten MX2 N545BW

Upon Reaching aircraft push this lever in. Next Rotate it in a clockwise position to open the canopy. Once the canopy is open you can simply just push the canopy forward to come off its hinges.

Next,
Ignition Switch down to
kills the magnetos.

Then,
All switches push up to turn off.
Red Switch is master switch and
will kill all power as well.

Next,
Between my legs is the fuel valve and shutoff valve. The red button on the left is the fuel shutoff. Pull this button to shut the fuel off. When doing acro the aircraft will only be on the header tank. The max fuel in this tank is 18 us gallons. The red valve on the right will not need to have anything done just the left red button pulled to shut fuel off.

Next is to extract me from the aircraft. Simply pull on these levers. Undo the buckles, and place them off to the side.

Simply grab on these black restraints lift me out of the aircraft. The parachute will be attached to my body.
